1	1.	(Previously Presented)	A system for use with electric equipment, the
2	system comprising:		
3	a hous	sing;	
4	a first	input/output (I/O) device	configured to couple to the electric equipment:

a monitor coupled to the first I/O device and configured to determine information regarding the electric equipment;

a second I/O device configured to communicate with a remote computer via a

a second I/O device configured to communicate with a remote computer via a communication network, the monitor being configured to provide the information regarding the electric equipment to the communication network via the second I/O device;

a memory that stores a computer-executable program configured to be executed by the remote computer to provide a computer interface for providing indicia of the information regarding the electric equipment, the computer interface being in a format that is distinct from a network browser format; and

an interface-provisioning device coupled to the memory and the second I/O device and configured to convey the computer-executable program toward the remote computer via the second input/output device and the communication network:

wherein each of the first and second I/O devices, the monitor, the memory, and the interface-provisioning device are disposed at least partially in the housing.

- 2. (Previously Presented) The system of claim 1 wherein the computer
   executable program is configured to provide an interface when executed.
- 1 3. (Original) The system of claim 2 wherein the computer-executable program comprises the interface application.

Appl. No. 10/668,620 Amdt. dated September 25, 2008 Amendment under 37 CFR 1.116 Expedited Procedure Examining Group 2142

4

transfer switch.

1 4. (Original) The system of claim 2 wherein the computer-executable 2 program is configured to obtain the interface application. 1 (Previously Presented) The system of claim 4 wherein the computer-2 executable program is configured to determine whether a desired version of an interface 3 application is stored by the remote computer and if not, then to obtain the interface application. 1 6. (Canceled) 7 (Previously Presented) The system of claim 2 wherein the interface is a 1 2 graphical-window-based interface. 1 8. (Original) The system of claim 1 wherein the monitor and the interface-2 provisioning device comprise software code. 1 9 (Original) The system of claim 1 wherein the system is an 2 uninterruptible power supply system further comprising: 3 an AC power input configured to receive AC power: 4 a DC power source; 5 an output circuit including a power output; and 6 a controllable switch coupled to the AC power input, the DC power source, and 7 the output circuit and configured to selectively couple at least one of the AC power input and the 8 DC power source to the output circuit. 1 10. (Original) The system of claim 1 wherein the monitor is configured to 2 determine information regarding at least one of air-conditioning equipment, a smart generator, a 3 leak detector, a power distribution unit, an environmental monitoring device, and an automatic

Amendment under 37 CFR 1.116 Expedited Procedure

Examining Group 2142

1	11. (Original) A computer program product residing on a computer-readable			
2	medium on a system coupled to electronic equipment, the computer program product comprising			
3	computer-readable instructions for causing a computer to:			
4	determine indications of operation of the electronic equipment; and			
5	convey a computer-executable program to a network toward a remote device to be			
6	executed by the remote device, the computer-executable program being configured to execute an			
7	interface application to provide a user interface for providing information regarding the operation			
8	of the electronic equipment, the interface being in a format different from a network-browser			
9	format.			
1	12. (Original) The computer program product of claim 11 wherein the			
2	computer-executable program comprises the interface application.			
1	13. (Original) The computer program product of claim 11 wherein the			
2	computer-executable program is configured to obtain the interface application.			
1	14. (Original) The computer program product of claim 13 wherein the			
2	computer-executable program is configured to determine whether a desired version of an			
3	interface application is stored by the remote device and if not, then to obtain the interface			
4	application.			
1	15. (Canceled)			
•	iv. (Californa)			
1	16. (Previously Presented) The computer program product of claim 11			
2	wherein the interface is a graphical-window-based interface.			
1	17. (Currently Amended) An uninterruptible power supply (UPS) system			
	Y - 1 - 1 - 1 - 1 - 1 - 1 - 1 - 1 - 1 -			
2	comprising:			
3	an AC power input configured to receive AC power;			
4	a DC power source;

an output circuit including a power output; 6

a controllable switch coupled to the AC power input, the DC power source, and the output circuit and configured to selectively couple at least one of the AC power input and the DC power source to the output circuit;

a first input/output (I/O) device configured to couple to electric equipment:

a monitor coupled to the first I/O device and configured to determine information regarding at least one of power use and power needs of the electric equipment;

a second I/O device configured to communicate with a remote computer via a communication network:

a memory that stores a computer-executable program configured to be executed by [[a]] the remote computer to provide a computer interface for providing indicia of the information regarding the UPS system, the computer interface being in a format that is distinct from a network browser format; and

an interface-provisioning means for conveying the computer-executable program toward the remote computer via the second input/output device and the communication network.

## 18 (Canceled)

- 19 (Previously Presented) The system of claim 17 wherein the interface is a graphical-window-based interface.
- 1 20. (Currently Amended) A method of providing information regarding 2 electronic equipment, the method comprising:

monitoring operation of the electronic equipment at a first device;

receiving, at the first device, an information request regarding the electronic equipment from a network browser application of a requesting device remote from the first device;

attempting, at the first device, to determine whether the requesting device currently stores a desired version of a computer-executable user-interface program; and Appl. No. 10/668,620 Amdt. dated September 25, 2008 Amendment under 37 CFR 1.116 Expedited Procedure Examining Group 2142

executing a <u>the</u> computer-executable user-interface program at the requesting device to produce a user interface for providing information regarding the operation of the electronic equipment, the interface being in a first format that is distinct from a second format associated with the network browser application.

- 22. (Currently Amended) The method of claim 24-20 further comprising transferring the computer-executable program to the requesting device if the attempting to determine fails to determine that the requesting device currently stores the desired version of the computer-executable user-interface program.
- 1 23. (Original) The method of claim 22 further comprising transferring the
  2 computer-executable program to the requesting device if the attempting to determine determines
  3 that the requesting device does not currently store the desired version of the user-interface
  4 computer-executable program.
- 1 24. (Currently Amended) The method of claim 21-20 further comprising
  2 abstaining from transferring the computer-executable program to the requesting device if the
  3 attempting to determine determines that the requesting device currently stores the desired version
  4 of the computer-executable user-interface program.
- 1 25. (Original) The method of claim 24 further comprising instructing the 2 requesting device to execute the computer-executable user-interface program stored by the 3 requesting device.
- 1 26. (Original) The method of claim 20 further comprising:
  2 transferring an address of a network server accessible from the remote device to
  3 the remote device; and
- 4 accessing the network server from the remote device and transferring to the
  5 remote device at least one of the computer-executable user-interface program and a computer-

- 6 executable loader program configured to determine whether a desired version of the user-
- 7 interface program is stored in association with the remote device.
- 1 27. (Canceled)
- 1 28. (Previously Presented) The method of claim 20 wherein executing the 2 user-interface program produces a graphical-window-based user interface.
- 1 29. (Original) The method of claim 20 further comprising controlling the electronic equipment by manipulating the user interface.
- 1 30. (Currently Amended) A computer program product residing on a 2 computer-readable medium and comprising computer-readable and computer-executable 3 instructions for causing a computer to:
  - execute an interface-producing program to produce a graphical-window-based user interface on a display of the <u>a</u> first device for providing information regarding the operation of the electronic equipment, wherein the electronic equipment is monitored by a second device remote from the first device; and
  - determine whether a desired version of the interface-producing program is stored in association with the first device.
- 1 31. (Original) The computer program product of claim 30 wherein the
  2 instructions are configured to cause the computer to access a remote server and download the
  3 desired version of the interface-producing program if the computer program product fails to
  4 cause the computer to determine that the desired version of the interface-producing program is
  5 stored in association with the first device.
- 1 32. (Previously Presented) The system of claim 1 wherein the interfaceprovisioning device is configured to convey the computer-executable program toward the remote
  computer via the second input/output device and the communication network in response to a

Appl. No. 10/668,620 Amdt. dated September 25, 2008 Amendment under 37 CFR 1.116 Expedited Procedure Examining Group 2142 PATENT

- determination that the remote computer is not presently storing a latest version of the computer
   executable program.
- 1 33. (Previously Presented) The system of claim 32 wherein the interface-
- 2 provisioning device is configured to make the determination that the remote computer is not
- 3 presently storing the latest version of the computer-executable program.
